*Note:*

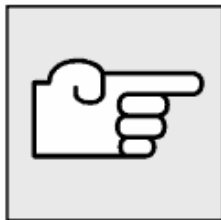

If a vehicle has been driven with depressurized air spring struts/air springs, the air spring struts/air springs must be replaced.

Lift vehicle.

Air spring strut of air spring is OK:

1. when the gaiter cannot be compressed by hand
2. when there is no discernible visible damage
3. when the rolling fold is uniform

*Note:*

If one of the above-mentioned points fails the test, then the air spring strut or air spring must be replaced.
